

**THE** **WORLD'S** **LARGEST**

We claim:

1. A snag-free wristwatch having substantially smooth surfaces and flowing contours and free of elements and external stems which might injure the skin of persons whom the wearer of the wristwatch might contact, comprising battery operated watch means for displaying time, pressure sensitive device means for control of said watch, and band means of flexible material for retaining said watch on the limb of wearer, said watch means, said pressure sensitive device means and said band means having flowing contours and surfaces substantially smooth to the touch.
2. The snag-free wristwatch of Claim 1 further including snag-free access means for replacing said battery, said access means having substantially smooth and flowing contours when closed.
3. The snag-free wristwatch of Claim 1 further including snag-free clasp means having substantially smooth and flowing contours when closed.
4. The snag-free wristwatch of Claim 1 further including snag-free clasp means for closure of said band wherein said clasp means are of the bayonet type, well known in the art, having the closure release within and adjacent to elastically deformable portions of said band into which said bayonet is inserted when said clasp is closed, said clasp having substantially smooth and flowing contours when closed.

- 10627 05495500
5. The snag-free wristwatch of Claim 1 wherein said wristwatch is water-resistant.
  6. The snag-free wristwatch of Claim 1 further including snag-free attachment means connecting said watch to said band, with said attachment means having substantially smooth and flowing contours.
  7. The snag-free wristwatch of Claim 1 wherein said snag-free band is stretchable and has substantially smooth and flowing contours.
  8. The snag-free wristwatch of Claim 1 wherein said watch is set in said band, with the display and exposed portions of said watch and adjacent portions of said band having substantially smooth and flowing contours.
  9. The snag-free wristwatch of Claim 1 further including ornamentation, which may include precious gems, incorporated into said watch and said band so as to be visible within the substantially smooth surface and flowing contours of said watch and said band.
  10. The snag-free wristwatch of Claim 1 wherein said pressure sensitive device means for control of said watch are located below and adjacent to elastically deformable indents on the surface of said watch, said indents being snag-free and below the substantially smooth surface of said watch.

11. The snag-free wristwatch of Claim 1 further including multifunction and special use capabilities such as medical monitoring, in the substantially smooth and flowing contours of the form of said wristwatch.
12. A snag-free wristwatch having substantially smooth surfaces and flowing contours and free of elements and external stems which might injure the skin of persons whom the wearer of the wristwatch might contact, comprising battery operated watch means for displaying time, pressure sensitive device means for control of said watch, and band means of flexible polymer-based material for retaining said watch on the limb of wearer, said watch means, said pressure sensitive device means and said band means having flowing contours and surfaces substantially smooth to the touch.
13. The snag-free wristwatch of Claim 12 further including snag-free access means for replacing said battery, said access means having substantially smooth and flowing contours when closed.
14. The snag-free wristwatch of Claim 12 further including snag-free clasp means having substantially smooth and flowing contours when closed.
15. The snag-free wristwatch of Claim 12 further including snag-free clasp means for closure of said band wherein said clasp means are of the bayonet type, well known in the art, having the closure release within and adjacent to elastically deformable portions of said band into which said bayonet is inserted when said clasp is closed, said clasp having substantially smooth and flowing contours when closed.

16. The snag-free wristwatch of Claim 12 wherein said wristwatch is water-resistant.
17. The snag-free wristwatch of Claim 12 further including snag-free attachment means connecting said watch to said band, with said attachment means having substantially smooth and flowing contours.
18. The snag-free wristwatch of Claim 12 wherein said snag-free band is stretchable and has substantially smooth and flowing contours.
19. The snag-free wristwatch of Claim 12 wherein said watch is set in said band, with the display and exposed portions of said watch and adjacent portions of said band having substantially smooth and flowing contours.
20. The snag-free wristwatch of Claim 12 further including ornamentation, which may include precious gems, incorporated into said watch and said band so as to be visible within the substantially smooth surface and flowing contours of said watch and said band.
21. The snag-free wristwatch of Claim 12 wherein said pressure sensitive device means for control of said watch are located below and adjacent to elastically deformable indents on the surface of said watch, said indents being snag-free and below the substantially smooth surface of said watch.

22. The snag-free wristwatch of Claim 12 further including multifunction and special use capabilities such as medical monitoring, in the substantially smooth and flowing contours of the form of said wristwatch.
